1. What the administrator does

The administrator sets the school up, controls who can sign in, activates the system after the free trial and keeps backups. The administrator can also do everything teachers and the accountant can do.

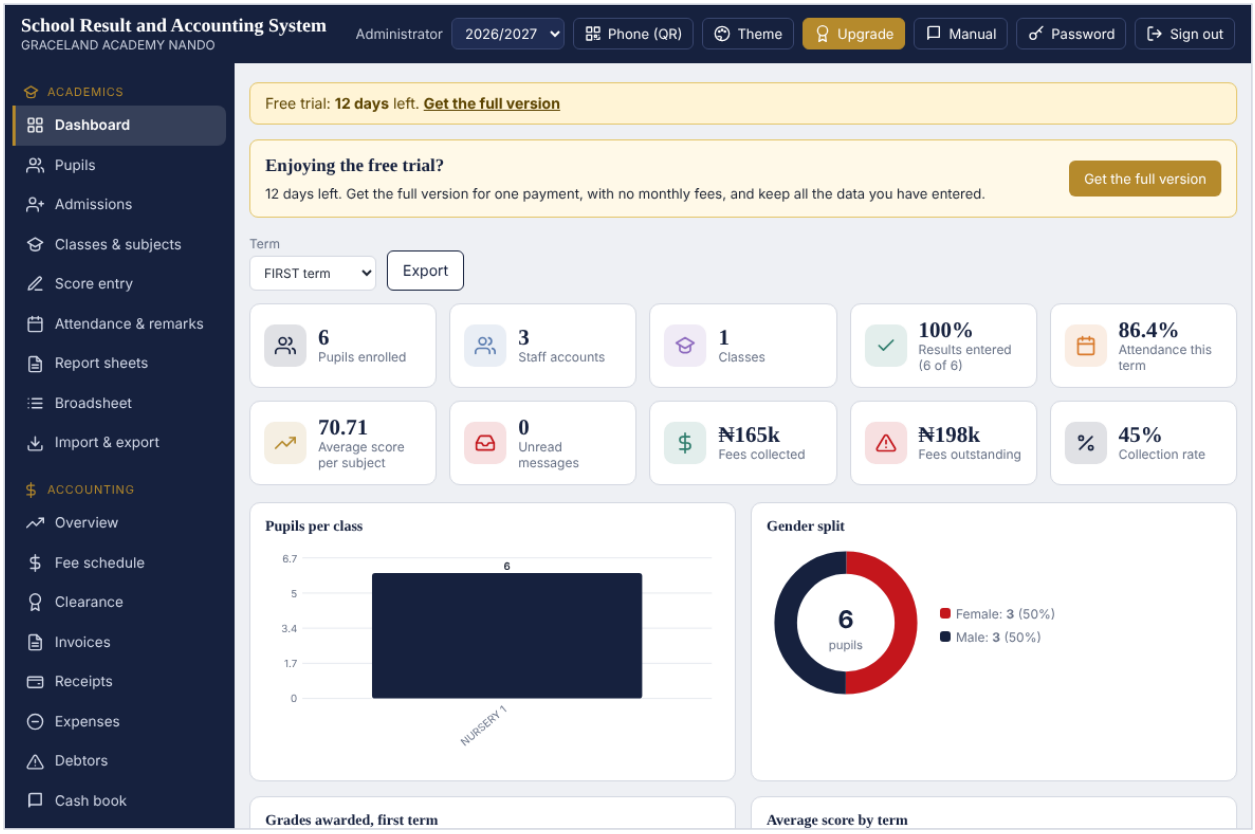

Signing in

1. Open the address given by your school (for example **http://192.168.1.10:8080**) in any browser on the school network.
2. Type your username and password and press **Sign in**.
3. Use the **Password** button at the top to change your password, and **Sign out** when you finish.
4. The **User manual (PDF)** button downloads this guide again.

2. The dashboard

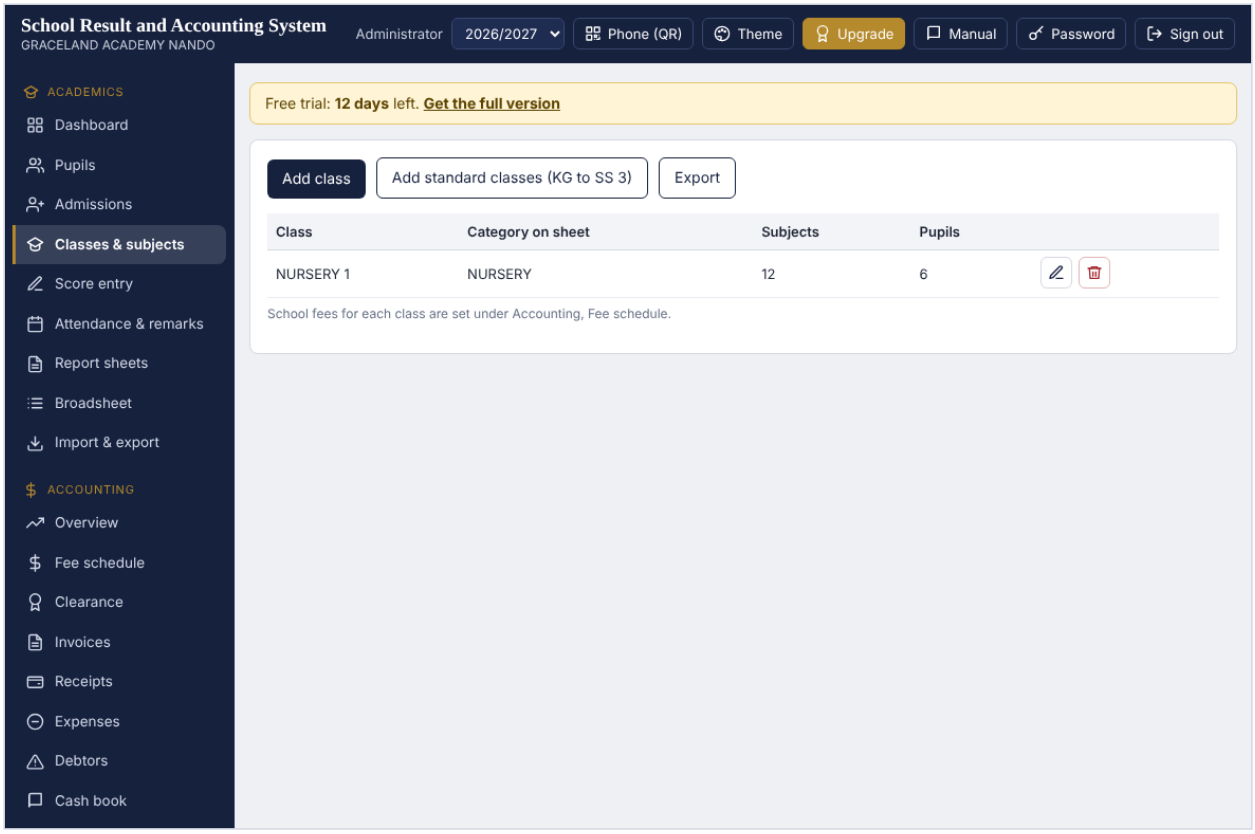

The **menu on the left** keeps every page open in a vertical list under three headings: **Academics**, **Accounting** and **Admin**. On a phone the menu becomes icons and moves to the bottom of the screen. A yellow banner shows how many trial days are left.

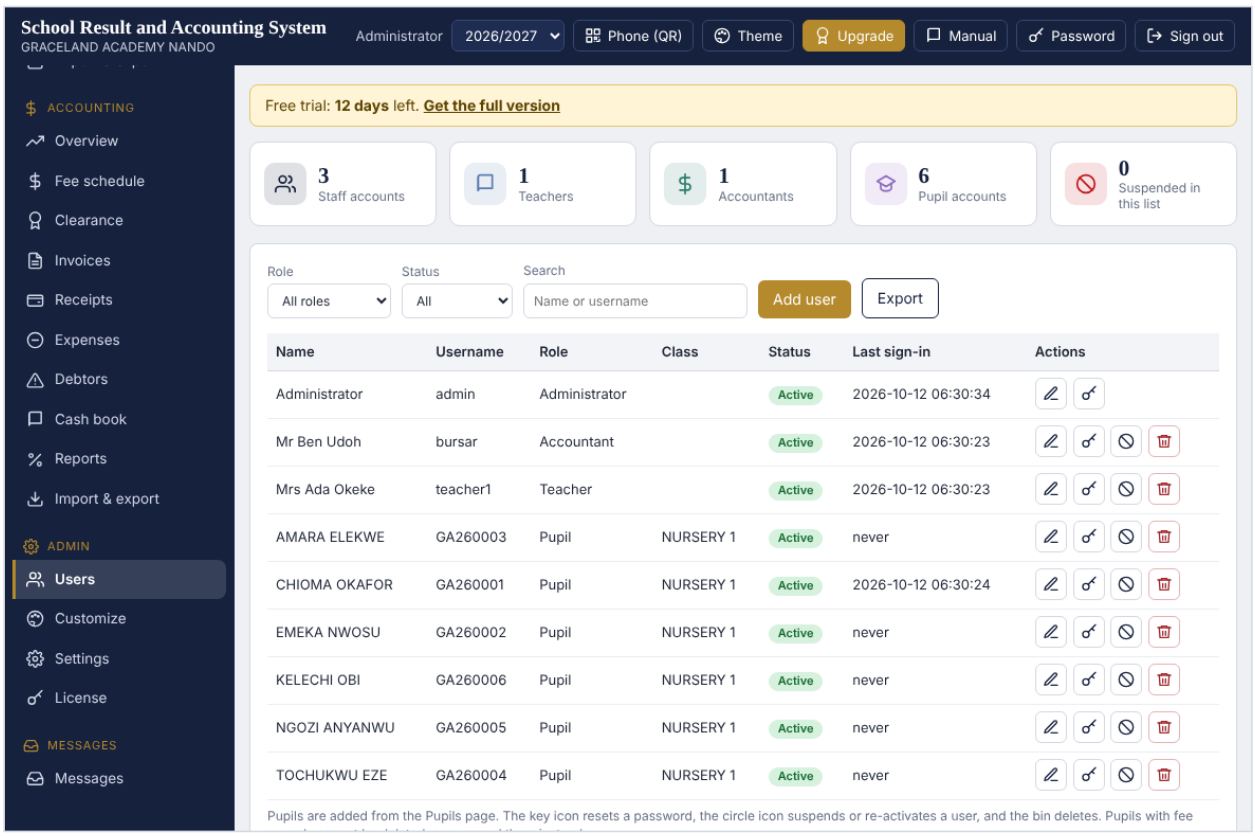

Administrator dashboard showing pupils, classes and results entered per term.

3. First-time setup (do these in order)

1. **Admin, Settings**: type the school name, address, phone line and motto exactly as they should print on report sheets. Upload the school crest. Set the **current session** (for example 2026/2027). Add the bank details that print on invoices.
2. **Academics, Classes & subjects**: press **Add standard classes** to create KG 1-2, Nursery 1-2, Primary 1-6, JSS 1-3 and SS 1-3 with a starter subject list. Edit any class to change its subjects. Each class prints its category (KG, NURSERY, PRIMARY or SECONDARY) on the report sheet.
3. **Admin, Staff**: add teachers (role *Teacher*) and the bursar (role *Accountant*), each with a username and password.
4. **Accounting, Fee schedule**: enter the school fees for each class. Use **Copy to all** to reuse a schedule for every class in the same category.
5. **Academics, Pupils**: add pupils one by one or use **Import list**. A Reg No is created automatically and is also the pupil's first password.

Classes page, with the button for standard classes.

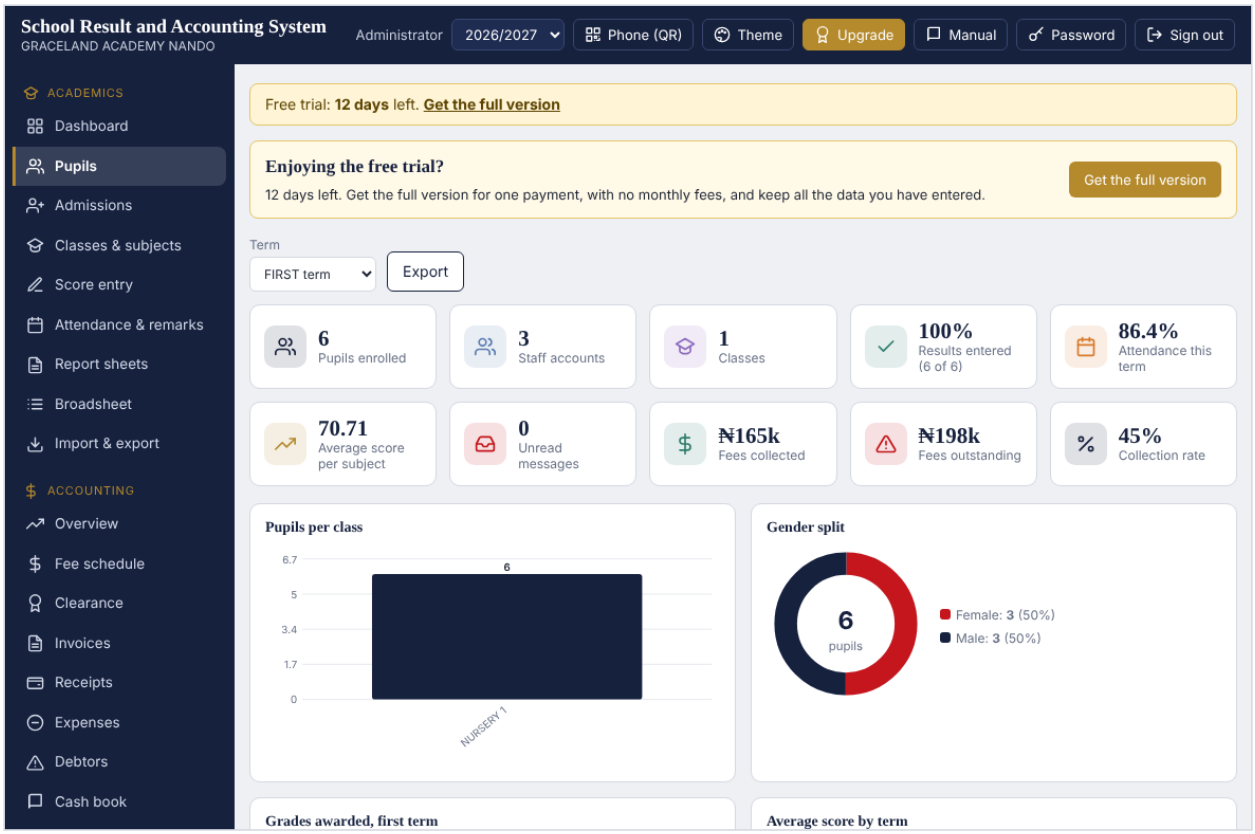

Staff page: teachers and accountants get their own logins.

4. Pupils

Press **Add pupil** to enter name, class, gender, date of birth, parent phone and a passport photo (the photo prints on the report sheet). To promote a class at the end of the session, tick the pupils, choose the new

class beside **Move selected pupils to** and press **Move**. **Reset password** sets a pupil's password back to their Reg No.

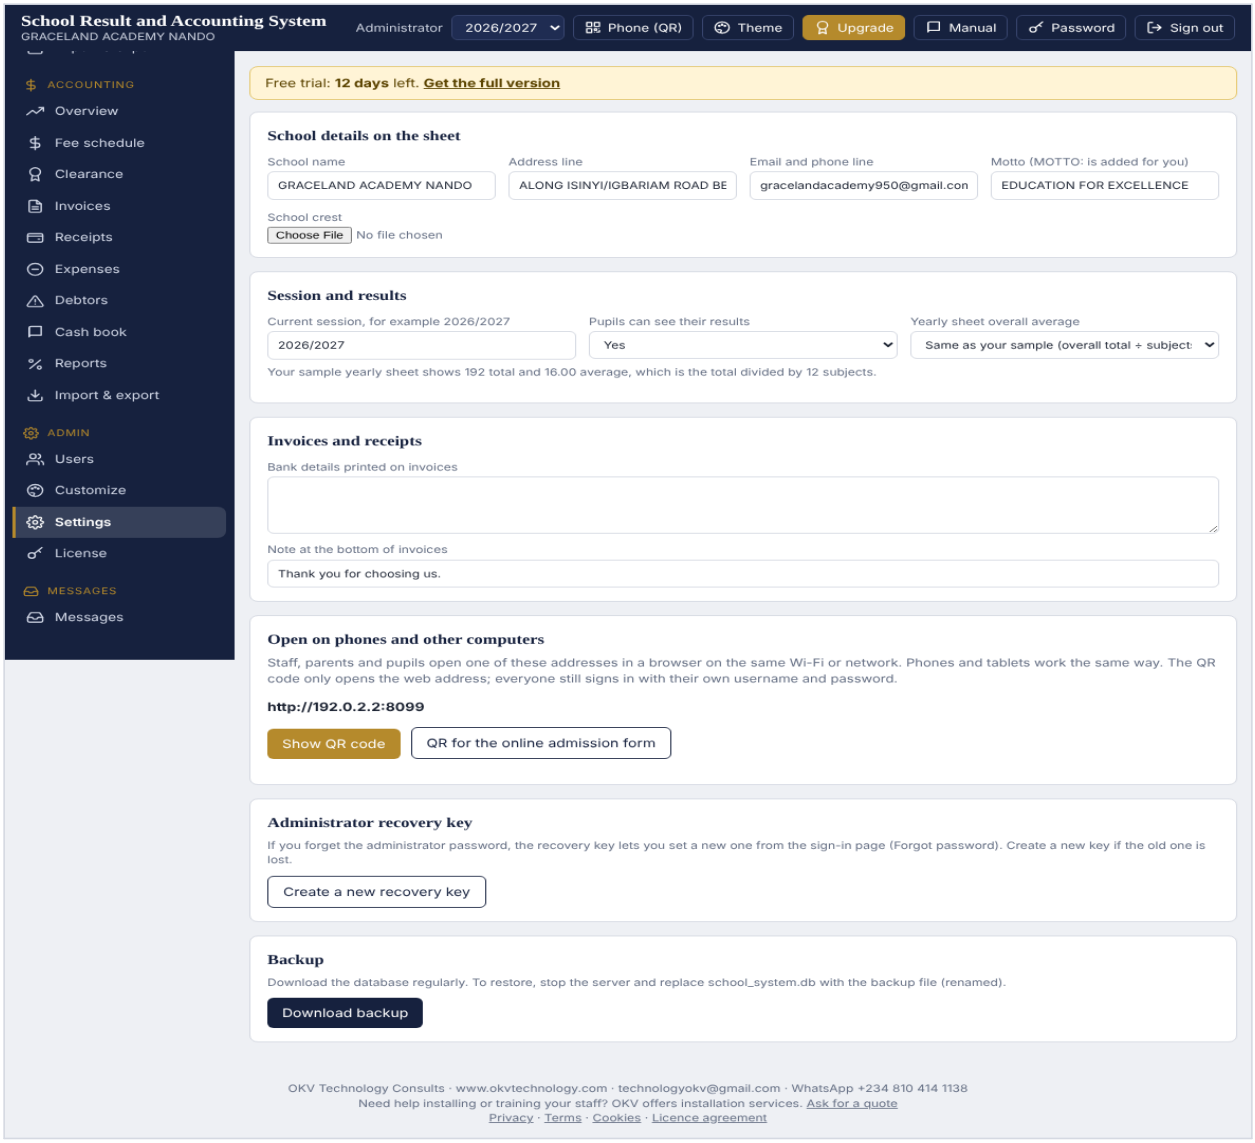

Pupils page.

Pupils who have invoices or receipts cannot be deleted, because financial records are kept. Move them to another class instead.

5. Settings

Pupils can see their results lets you hold results back until you are ready to release them. **Yearly sheet average** chooses how the overall yearly average is worked out. The page also shows the address other computers use to open the system and has the **Download backup** button.

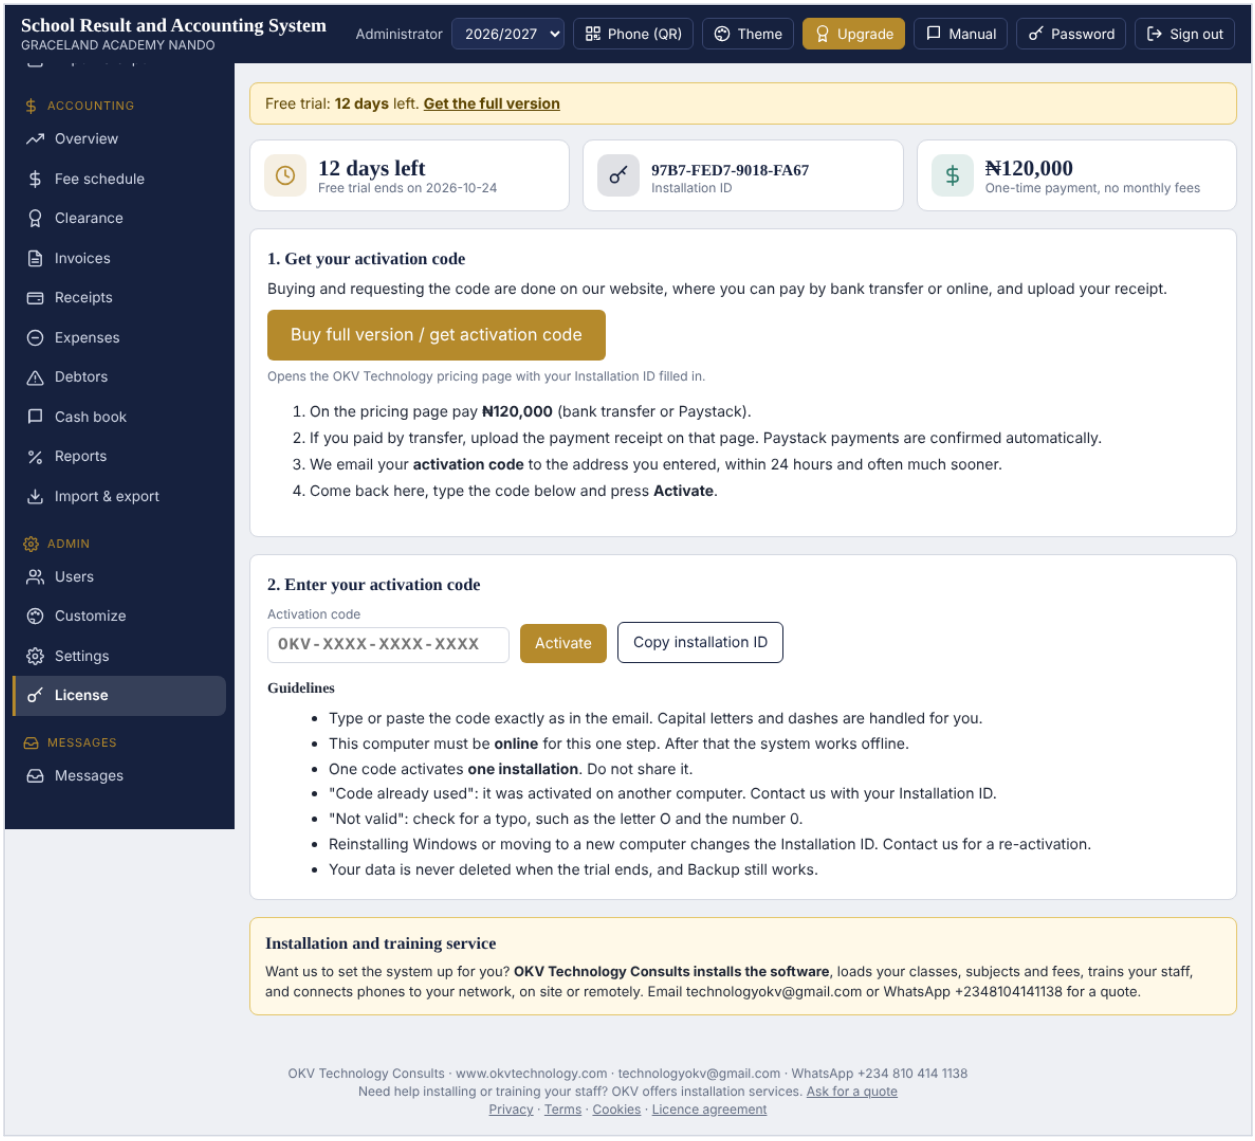

Settings page.

6. Backups

Press **Download backup** at least once a week and keep the file on a flash drive or in your email. To restore, stop the system, replace **school_system.db** in the program folder with the backup file (renamed) and start it again. Backups still work after the trial has ended.

7. Free trial and activation

The system works fully for **12 days** from first start. After that, only the administrator can sign in and only the License page works. Nothing is deleted.

Admin, License page: installation ID, activation steps and the request form.

To activate

1. Pay **NGN 120,000** (one time, no monthly fees) to the account shown on the License page.
2. On the License page fill **Request activation**: school name, your name, email, phone, amount, payment date, bank and reference, and attach the payment receipt (a photo or PDF under 4 MB). Press **Submit request**.
3. A confirmation email arrives straight away. Your **activation code is emailed within 24 hours**, usually much sooner.
4. Type the code into **Activation code** and press **Activate**. The computer must be online for this one step. The page then shows **Activated**.

Keep the **Installation ID** shown on the page. Quote it if you contact OKV Technology Consults. You can also use **Register this installation** and **Send message** on the same page to reach support.

8. Moving to a new computer

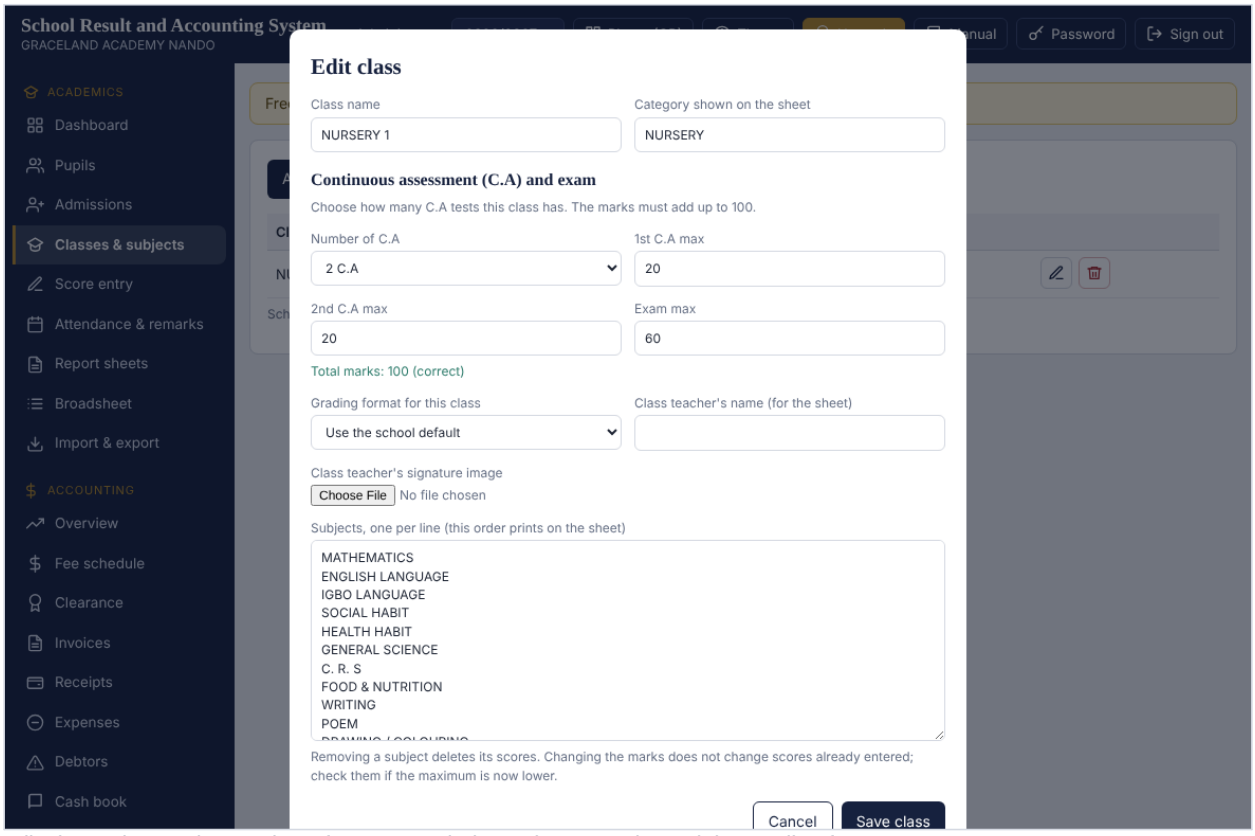

Copy the whole program folder (it contains your database) to the new computer, or install fresh and restore your backup. Because activation belongs to an installation, contact OKV Technology Consults for a re-activation code when the installation ID changes.

9. Quick troubleshooting

- **Other computers cannot open the system**: check they are on the same network and that Windows Firewall allows Python or the program when asked.
- **Forgot the admin password**: contact OKV Technology Consults with your installation ID.
- **A teacher sees "not allowed"**: the role does not include that page. Change the role under Admin, Staff.
- **The date looks wrong message**: set the correct date and time on the computer.

10. Number of C.A tests and grading (new)

Each class can have its own assessment structure. Open **Classes & subjects** and edit a class. Choose **1 C.A, 2 C.A or 3 C.A**, then type the maximum mark for each C.A and for the exam. The page tells you whether the marks add up to 100; the class cannot be saved until they do. Common structures are 40 + 60, 20 + 20 + 60 and 10 + 10 + 10 + 70. Score entry then shows exactly the columns that class uses, and report sheets print them.

Edit class: choose the number of C.A tests, their maximum marks and the grading format.

Grading format. The standard scale is A to F as on your current sheets. You can also choose the **WAEC style (A1, B2, B3, C4, C5, C6, D7, E8, F9)** or define your own bands. Set the school default under **Admin, Customize, Grading format**, or choose a different format for a single class. Changing the format changes how grades display and print; the marks are not touched.

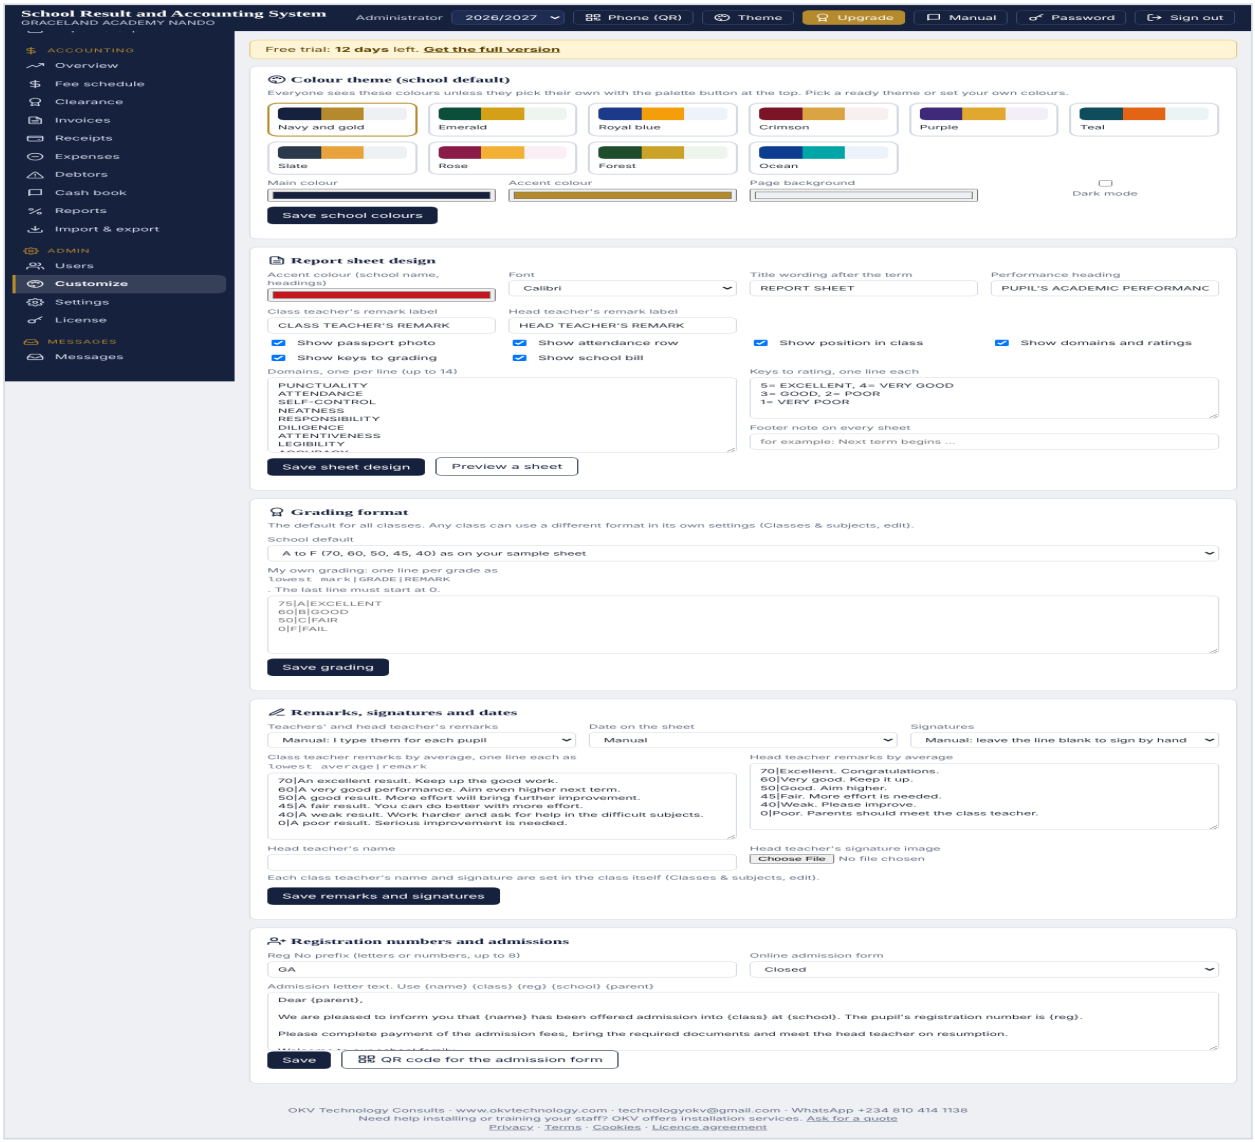

11. Remarks, signatures and dates: automatic or manual (new)

Under **Admin, Customize, Remarks, signatures and dates** choose for each item whether it is **Manual** (teachers type it) or **Automatic** (the system writes it from the pupil's average, using wording you can edit;

signatures and dates fill in from the class teacher and head teacher details). A pupil with no scores gets no automatic remark. You can mix: for example automatic remarks but a handwritten signature line.

12. Colour themes and customising everything (new)

Theme (top bar) lets any user pick a colour theme for themselves. The administrator sets the school default under **Admin, Customize**: choose a ready theme or your own main, accent and background colours, and switch dark mode. The same page changes the report sheet design: accent colour, font, headings, and whether the photo, attendance row, position, domains, grading keys and school bill show.

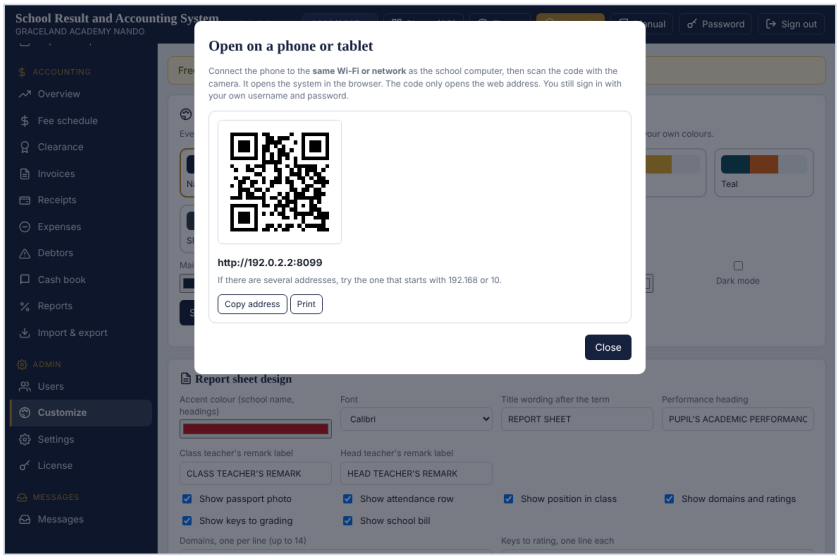

Customize: colour themes, report sheet design, grading, remarks and admissions options.

13. Phones and tablets, and the QR code (new)

The system adjusts to any screen, from a phone to a big monitor. On a small screen the menus become icons and the main groups move to a bar at the bottom. To open it on a phone: press **Phone (QR)** in the top bar. The phone must be on the **same Wi-Fi** as the school computer. Scan the code with the camera. **The QR code only opens the address in the browser. It does not sign anyone in**; the user still types

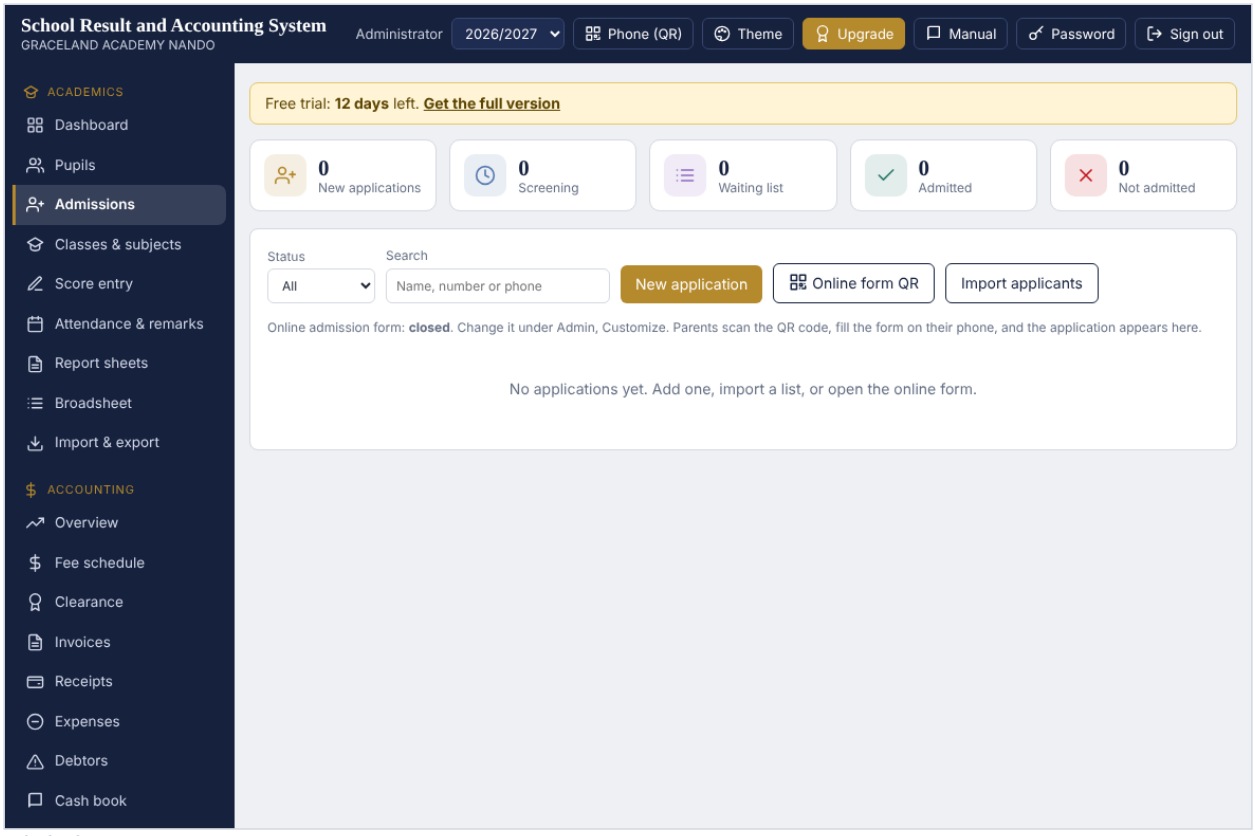

their own username and password. You can also press **Print** to put the code on a notice board.

The QR code and the address it opens.

14. Admissions and registration (new)

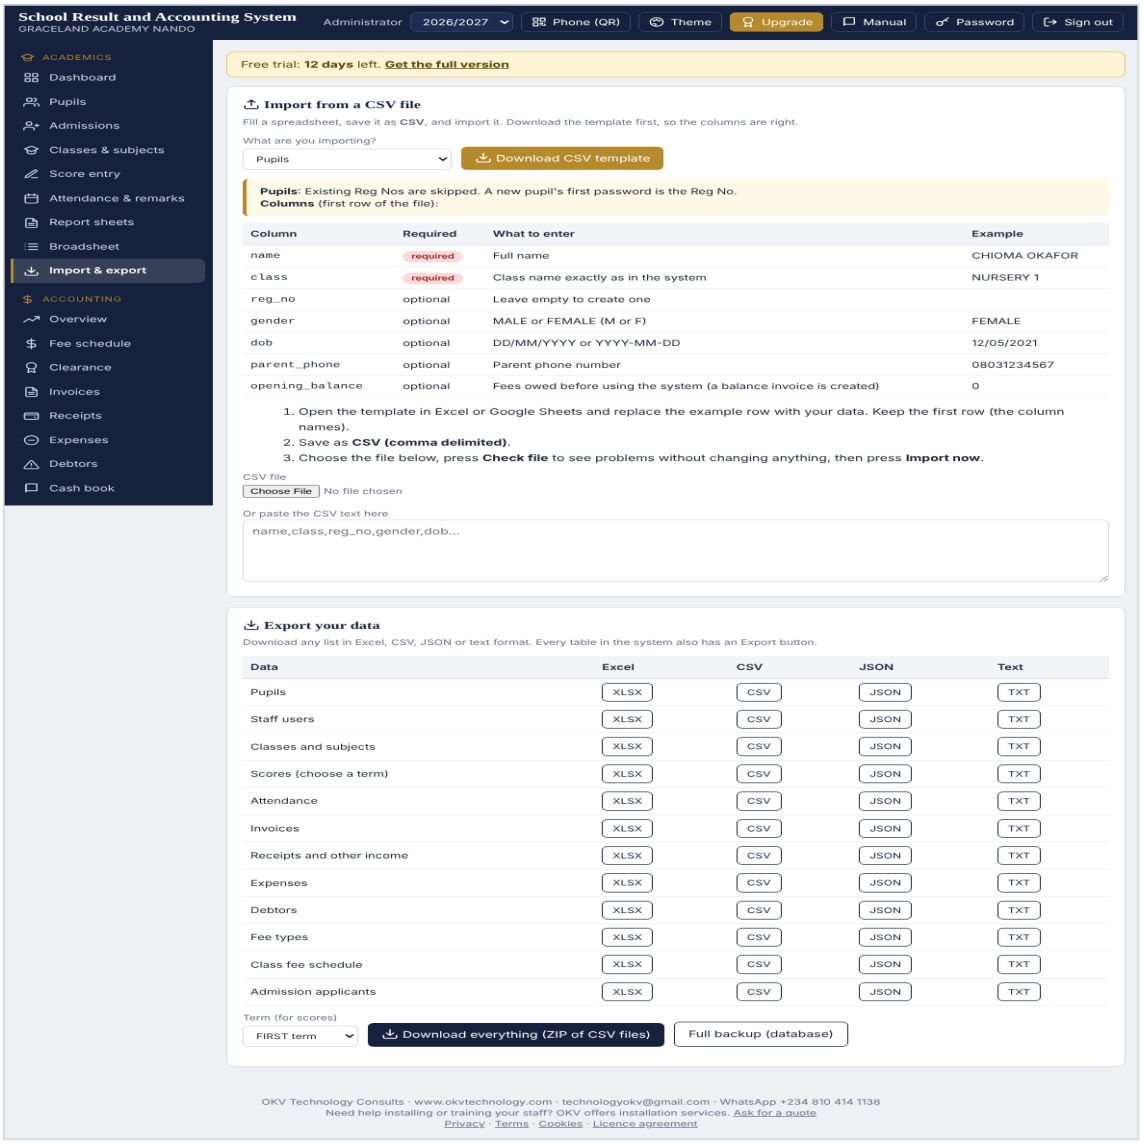

Open **Academics, Admissions**. Switch on the online form under **Admin, Customize** and show the form's QR code at the gate or send the link to parents. Each application is listed with a status: **Applied, Screening, Waiting list, Admitted, Not admitted**. Press **Admit** to create the pupil with a Reg No in the chosen class and, if you wish, an admission-fee invoice; print the **admission letter** from the same list. You can also add applicants yourself or import them from a CSV file.

Admissions page.

15. Import and export (new)

Open **Academics, Import & export**. Choose what to import (pupils, staff, subjects, scores, attendance, fees, fee types, invoices, payments, expenses, other income or applicants), press **Download CSV template**, fill it in Excel or Google Sheets, save as **CSV**, choose the file and press **Check file**. The check lists every problem row without changing anything. Fix them or continue with **Import now**: good rows are saved and bad rows are reported. Every list in the system can be exported as **Excel, CSV, JSON or text** from the same page or its own Export button, and **Download everything** gives one ZIP.

Import and export centre.

16. Users and messages

Admin, Users lets you add, edit, suspend, reactivate, reset the password of and delete users. If you forget your own admin password, use **Forgot password** on the sign-in page: enter your recovery key, or ask OKV Technology Consults for a one-time reset code with your installation ID. Under **Messages** everyone can write to one person or to a whole group.
